

**Memo: To All Bryston Customers,
Subject: Bound for Sound Components of Merit.**

March 2005:

I am very please to announce that the recent issue of the magazine Bound for Sound has awarded both the **Bryston 4B SST Power Amplifier** and the **Bryston B60 Integrated Amplifier**

“Component of Merit Awards”

Here is what they had to say:

Bryston 4B SST Stereo Amplifier:

“A legend of sorts that has a history going back to the early 1970's. Bryston doesn't make changes capriciously. Although there have been at least two changes of note to the 4B in the last ten years or so. The ST buffered amps, and the improved SST buffered amps.

This is a **superb amplifier**, especially for the money. With monstrous power output of 300 wpc there is little that this amp can't power with ease. It is built extremely well (hence the 20 year warranty), without going to meaningless extremes. The sound of this amp is on the warm and relaxed side, though not so much so that it could be considered a fix for a bright or forward system. Balanced as well as single ended inputs offer flexibility. It is bridgeable.”

Bryston B-60 Integrated Amplifier:

“ ... I've always liked this integrated for its' easy on the ears presentation. It still retains, however, the kick and detailing necessary for an afternoon with Led Zeppelin. A great balance to strike for a product with a 20 year warranty.”

Our thanks to Martin at Bound for Sound for his kind words.

James Tanner,
Bryston
