- Wall bracket included
- AUX input
- Can use and charge rechargeable batteries
- *Batteries not included*

tangent Uno 2go

All you like; now on the move

Philosophers are well known for thinking great thoughts, and communicating them to others. Scientists think great thoughts too, then test them to find out whether or not they are true. Product developers follow similar paths, turning their great ideas into great products. Products that educate, amuse, and improve lives.

At Tangent, our great thinkers are no different. They are a restless bunch, constantly asking "How can we do this better?"; refusing to sit back and rest on their previous successes.

Among their most recent thoughts was to take a super successful series of products and improve it. The new Tangent UNO 2-go FM/AM radio is the latest addition to our range of table-top radios, but now with an extra dimension: portability.

Off to the beach today? Grab your Tangent UNO 2-go, and some sunscreen, and head out. Time to finish that job in your workshop? Collect your Tangent UNO 2-go on the way downstairs. Just don't forget to bring it back in, pop-

ping it on the kitchen countertop when you're done so your spouse can tune in later!

The Tangent UNO 2-go incorporates several of the features from the original Tangent UNO: the 50's-inspired tuning dial, the solid tuning knob, and a minimal amount of additional knobs. In this new twist on success, however, the elements have been rearranged to fit the new manners of usage, with a robust, aluminium handle completing the makeover. Tip the handle towards the back of the radio, slide it into the accompanying wall bracket, and voila, a new placement possibility is born.

The sound quality of the new Tangent UNO 2-go is as great as always. The powerful 3" driver unit offers vocal and musical renditions honouring the original recordings, with realistic reproduction as its driving force.

Using rechargeable batteries like a good global citizen? The Tangent UNO 2-go automatically recharges these batteries when you connect it to the mains.
